Portfolio: har5h-20.github.io/harshtomar.github.io

SKILLS

Languages: Python, SQL, Java

Data Engineering: SSIS, ETL Pipelines, Data Warehousing, Data Modeling, Query Optimization, Performance Tuning, Stored Procedures

AI & GenAI: Generative AI, LLMs, RAG, LangChain, Prompt Engineering, OpenAI API

BI & Analytics: IBM Cognos, Power BI, Excel, Pandas, NumPy

Cloud & Tools: AWS, Docker, Git, GitHub, FastAPI, REST APIs

Databases: SQL Server, MongoDB

Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

WORK EXPERIENCE

Oracle Financial Services Software (OFSS)

June 2025 – Present

Associate Consultant

- Developed and maintained enterprise ETL pipelines using SQL Server Integration Services (SSIS) for financial data processing, handling millions of records across enterprise reporting systems.
- Optimized SQL queries, stored procedures, indexing strategies, and execution plans, improving report performance by approximately 35%.
- Built front-end reporting solutions using Java and Angular, seamlessly integrating enterprise backend APIs to deliver real-time data visualization for end-users.
- Designed and deployed 20+ IBM Cognos reports streamlining operational reporting workflows across business units.
- Translated Business Requirements Documents (BRDs) into technical architecture specifications, ensuring 100% alignment between business logic and ETL pipelines.
- Created technical design documents from scratch, documenting application architecture, data flows, technical specifications, and implementation details.
- Performed SQL Server performance tuning, database optimization, and ETL troubleshooting while collaborating with cross-functional teams to deliver production enhancements.

PROJECT WORK

Enterprise Knowledge Assistant using RAG and LLMs

- Built an AI-powered enterprise knowledge assistant capable of answering questions from PDFs, Word, Excel, and internal documentation using Retrieval-Augmented Generation (RAG).
- Developed document ingestion, semantic search, embedding generation, and vector indexing pipelines for accurate information retrieval.
- Integrated Large Language Models (LLMs) with FastAPI and ChromaDB to build sub-second query processing REST APIs for enterprise document retrieval.
- Technologies:** Python, LangChain, OpenAI API, FastAPI, ChromaDB, FAISS, Docker.

Groundwater Level Prediction using Deep Learning

- Developed a deep learning system to predict groundwater levels using rainfall, usage, population, temperature, humidity, migration, and soil parameters.
- Applied ADF-based stationarity analysis, p-value feature selection, lag features, rolling averages, and feature scaling for improved model performance.
- Trained and evaluated LSTM, GRU, and SimpleRNN deep learning models, achieving a peak R^2 score of 0.9772 with the optimal architecture.
- Technologies:** Python, TensorFlow, Keras, Pandas, NumPy, Scikit-learn.

EDUCATION

Shiv Nadar University

Bachelor of Technology in Computer Science Engineering
Greater Noida, Uttar Pradesh

2021 – 2025

CGPA: 7.52/10

CERTIFICATIONS

- AWS Certified Cloud Practitioner**
